DESCRIPTION OF SERVICES

TBE is not currently providing any telecommunications services. Our plan is to tend to the Mexican-American community to provide them with lower rates by focusing on the destinations they most often communicate with and provide them with services which are focused to their habits.

The origin of the communities can be traced back to very focused geographical locations in their countries of origin. We have performed such trace and intend to provide focused communications, which reduced our resale costs and allows us to provide these services at more affordable prices.

We have identified the Mexican-American community as summarized in the following figure:

Our business model calls for the implementation of a switch and platform in the U.S. that will enable the provision of telephony services primarily between the U.S. and Mexico. There is additional interest in generating traffic from Mexico to the World, specifically to Latin America, where other minorities have strong traffic interests.

TBE has designed three main lines of business:

Prepaid calling cards: For purchase of telephony time and termination on the other country. Calls will be originated via 800 numbers. Production of PINs and the ability to debit PINs real time in

accordance to elapsed time, promotions and route rates will be performed.

Premier individual callers: Individuals from the community with high LD needs to Mexico and the world. Calls will be originated via 800 numbers and customer sign up, account management and payment (credit or debit) will be web-enabled via secure site capable of debiting from major credit cards. Customers will have a password and PIN for telephone system access, web-based account/plan management , value-added services selection, call process options and review. In addition to being offered premier telephony rates. All intelligence for Value-added services will reside in servers associated with the switch and platform.

Corporate Accounts: Within the Mexican-American community, the established companies will be able to connect their PBX or direct telephone sets to a cost-effective VoIP CPE utilizing their existing internet connection.
